**DESIGN
YOUR
OWN!**

☑ SIMPLE ☑ FUN ☑ EASY

Getting Started

You can design you own fort! It's easy , , , just select the fort style, then choose from the many options and accessories to make it your very own!

Step 1: Choose the fort style that best fits your needs.

Check the Box

Which Fort offers you the right design, function, size or affordability elements you are looking for in a Play System? Find the page and begin to design your own Fort.

Step 2: Next choose the roof style you want for the fort.

Check the Box

Our extra heavy duty Tent Tops are tear resistant, two ply, washable, commercial grade fabric, UV protected and are available in 3 color choices: blue green or yellow. They offer maximum resistance against wear and fading from wind, water, mildew and sunlight! Or perhaps you prefer a Wood Roof for a more natural look that offers maximum shade.

Step 3: Would you like to add a Fort Swing Attachment?

Check the Box

Choose from our selection of A-Frame Attachments in 2, 3 or 4 positions or maybe you prefer our colossal Super Size A-Frame. It stands a whopping 10 feet high and 11 feet long. Big enough for an adult. You and your kids can soar to new heights! Also available for some Forts is a 3 or 4 position Ladder End. These Fort Attachments offer the added fun of monkey bars. A Fort Insert Rail is required when adding an A-Frame where there is an existing opening.

Step 4: Which accessories are available for my fort?

Check the Box

Check the diagram for the fort you have chosen. What level is my Fort Deck? How many openings are available to add Accessories to my Fort? Your fort may have multiple levels allowing you to choose from 4, 5 and 7 foot Deck Level Accessories. If you want to close off an opening - you should add a Fort Insert Rail. Remember you can always expand that opening with another accessory in the future.

Step 5: Can I expand the sandbox area in my fort?

Check the Box

Yes! Check out the Fort Options. You can add a Sandbox Cover or perhaps a Picnic Table or Lower Deck. Also available are the Safety Handrails that help discourage young children from walking into swings in motion.

Step 6: Are there other items I can add to my fort?

Check the Box

Definitely! Look under Accessories for additional hours of imaginary fun! Try a rappelling rope to challenge your climbers. An Ultrabuilt® Adjustable Seesaw is free standing and allows for even weight distribution regardless of the size of the rider.

Congratulations! You have just designed your own "Ultrabuilt®" Fort, with quality, durability, strength, value, innovative design, and safety in mind.
